

I am an over-the-road trucker and the metropolitan traffic and weather reports on XM radio are very important to my job. I can plan what routes to take and what the weather will be like when I get to a specific city, no matter where I am in the country. If I was to depend upon local stations for this information, I would not be able to receive this information until I was in that city's area and could not plan ahead. Please reject the National Association of Broadcaster's petition 04-160 so that local information can be heard nationwide. Thank you.
